

Enkase™ for Lawn and Garden

Enkase fully recyclable barrier technology can protect the integrity of your product and plastic packaging, preventing ingredient loss without sacrificing design flexibility. Enkase can be applied to any packaging, regardless of size or shape and enables packaging to be lighter, reducing costs and waste.

HDPE and polypropylene are widely used plastics in the lawn and garden market, but don't provide effective barriers against many ingredients. This can result in discoloration, weight loss, labels coming off, ingredient loss and formulation instability. Choosing Enkase will enable formulation protection, prevention of active ingredient loss and allow total design freedom for your packaging to be in any size, or shape.

<p>Stop ingredient loss</p>			<p>Facilitate use of mono-materials</p>
<p>Increase shelf life</p>			<p>Minimize your carbon footprint</p>
<p>Maintain product quality</p>			<p>Ensure compliance</p>
<p>Design flexibility</p>			<p>Enable PCR</p>

Enkase enables safe and effective storage in fully recyclable monolayer HDPE and PP packaging for standard lawn and garden ingredients such as hydrocarbons, petroleum distillates, essential oils and active ingredients.

Protect your brand with Enkase while eliminating ingredient loss, increasing shelf life, maintaining quality and minimizing your carbon footprint.
